Turn on 2-Step Verification

With 2-Step Verification, also called two-factor authentication, you can add an extra layer of security to your account in case your password is stolen. After you set up 2-Step Verification, you can sign in to your account with:

- Your password
- Your phone

Allow 2-Step Verification

1. Open your Google Account.
2. In the navigation panel, select **Security**.
3. Under "How you sign in to Google," select **2-Step Verification** › **Get started**.
4. Follow the on-screen steps.

Tip: If you use an account through your work, school, or other group, these steps might not work. If you can't set up 2-Step Verification, contact your administrator for help.

Turn on 2-step verification

Verify it's you with a second step

After you turn on 2-Step Verification, you must complete a second step to verify it's you when you sign in. To help protect your account, Google will ask that you complete a specific second step.

Computer AndroidiPhone & iPad

Use Google prompts

We recommend you sign in with Google prompts. It's easier to tap a prompt than enter a verification code. Prompts can also help protect against SIM swap and other phone number-based hacks.

Google prompts are push notifications you'll receive on:

- Android phones that are signed in to your Google Account.
- iPhones with the Smart Lock app, the Gmail app, the Google Photos app, the YouTube app, or Google app signed in to your Google Account.

Based on the device and location info in the notification, you can:

- Allow the sign-in if you requested it by tapping **Yes**.
- Block the sign-in if you didn't request it by tapping **No**.

For added security, Google may ask you for your PIN or other confirmation.

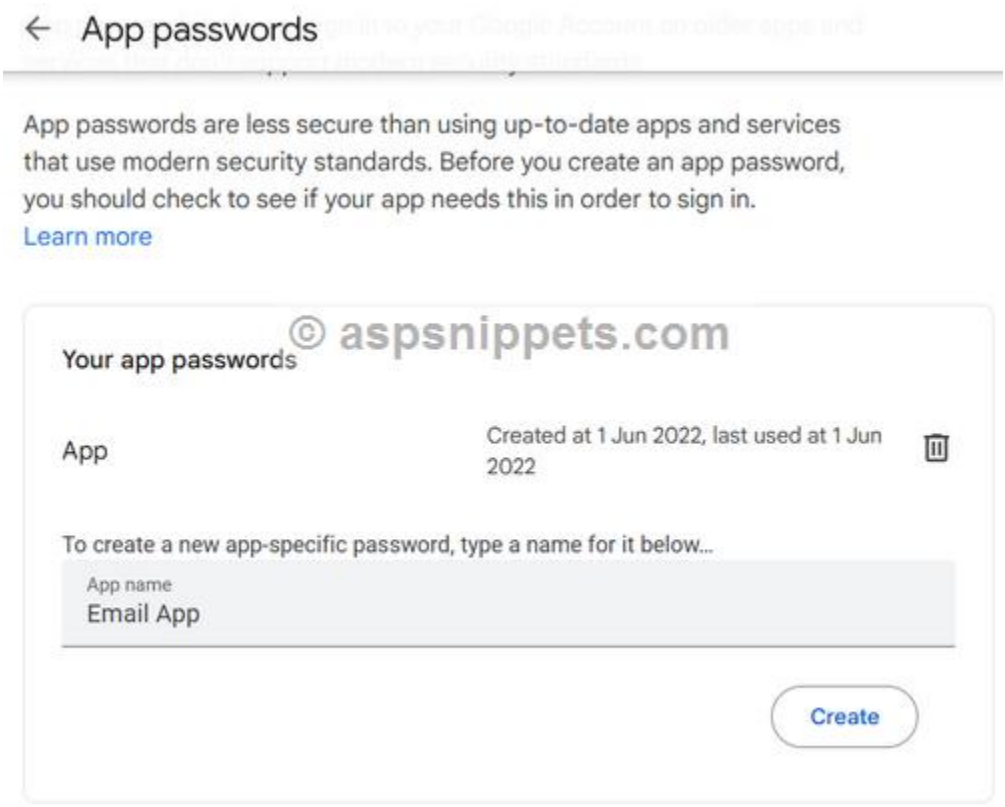

Setting Two Step Authentication

If Two Step Authentication is enabled for your Gmail Account, then the Less Secure Apps settings will not be available and you won't be able to send emails using your Gmail Password.

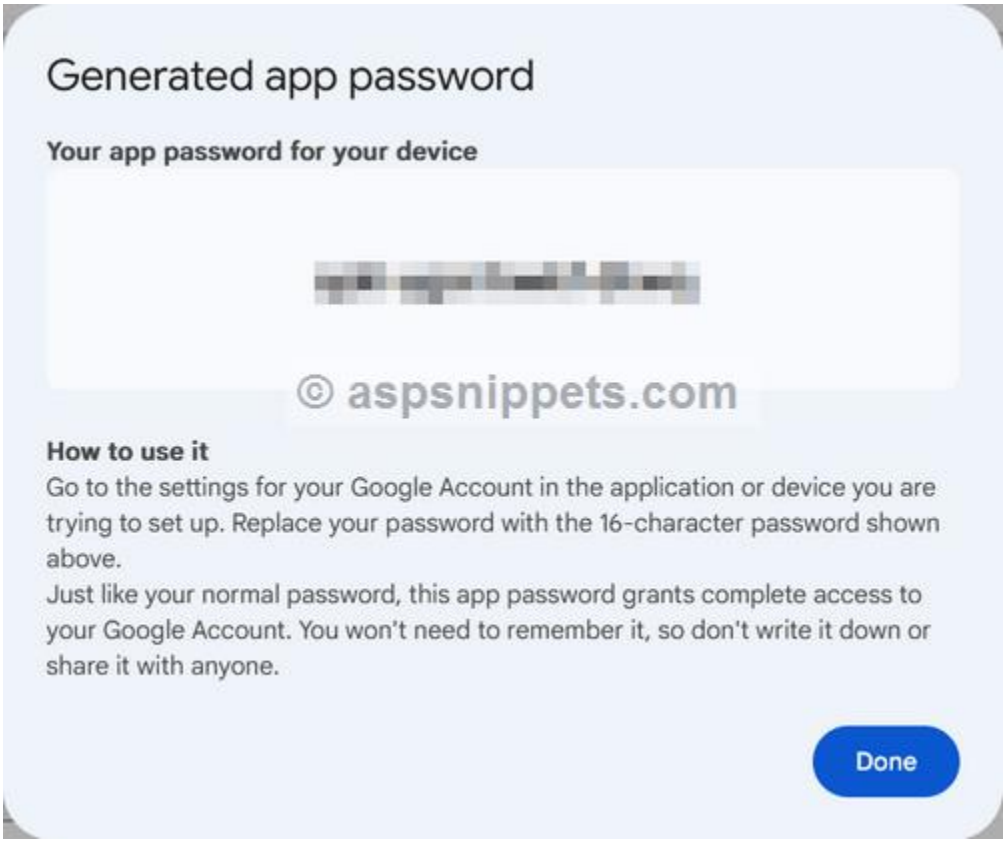

Thus, in such scenario, you will need to generate App Password for your Gmail Account using the following link.

https://myaccount.google.com/apppasswords

1. You will see the following page. Give the App, a suitable name and click the Create Button.

2. Once the app password is generated, copy and save the Password somewhere and click Done.

3. The App will be visible, but its Password will not be visible again. If you ever forget the Password, delete the App and create a new one.
